

Network auditing provides insight into how effective your network control and security practices are. The data gathered identifies vulnerabilities and threats to your network. Windemuller's skilled IT technicians can use that information to make necessary changes to ensure your network is operating at peak performance and meeting your quality standards

LAN AUDITING

Windemuller offers a LAN (Local Area Network) audit service to its customers. The LAN audit includes many benefits:

- Comprehensive Accounting of all servers, workstations, printers, and network devices
- Security threat assessment including open ports, unpatched servers, active user accounts and weak passwords.
- SNMP logging and network performance testing will provide a baseline and show configuration errors
- Application testing

WAN AUDITING

Windemuller offers a WAN (Wide Area Network) audit service. Performance and consistency from site to site is imperative for today's high bandwidth needs. Large files, Databases, and IP phone systems have stressed typical WAN's in recent years.

- Test performance to ensure ISP is delivering the speed and latency promised
- Test consistency of the connection from all endpoints
- Test endpoints for security, open ports, DOS resistance, etc.
- Measure the amount of data going over the WAN, recommend bandwidth mitigation or improvements
