

In the calibration of process control instrumentation, specifically when it comes to dealing with variables such as pressure, flow, and temperature, Windemuller works like a well-oiled machine. We operate by comparing a known standard to the instrumentation, verifying the known standard to the unknown and adjusting the instrumentation to match the standard.

Windemuller offers competitive pricing and consistent customer communication. We give our calibration documentation directly to the customer, both electronically and physically. We have built relationships with our customers: they trust us and use us consistently, every year.

## OUR EQUIPMENT

- Industry Standard, Fluke 787, 725
- Altek 830 Pressure Monitoring Calibrator
- Temperature Probes
- All tools are ANSI standardized every year to ensure accuracy.

## WINDEMULLER INSTRUMENT CALIBRATION PROJECTS

- Big Rapids Water Treatment Plant
- City of Hastings Water Treatment Plant
- Mackinac Island Water Treatment Plant / Waste Water Treatment Plant
- Nestle / Gerber
- City of Gaylord Waste Water Treatment Plant
- Little Traverse Bay Environmental Project
- Manistee Water Treatment Plant / Waste Water Treatment Plant
