December 2020

COMPLETION DATE

July 2021

SUMMARY

- Provided electrical and lighting upgrades for the facility
- Relocated lighting and added dimming feature
- Reconfigured power to place office technology in a central location

OVERVIEW

Fleis and VandenBrink (F&V) is a civil engineering and architecture firm headquartered in Grand Rapids, Michigan. Since their founding in 1993, they continue to emphasize their strong focus on infrastructure planning, design and construction. As F&V continues to grow, they decided to update their Traverse City office to present a more modern look. Windemuller was happy to assist with this remodel project by providing lighting and electrical upgrades for the facility.

This project required transparency and strong communication due to scheduling around F&V's busy workspace. Windemuller worked soundlessly during designated hours to accommodate the customers' work schedule, as they continued to work in office during the remodel. F&V opted for an open floor plan. Windemuller reworked the layout and power to ensure the office technology could be utilized in one central location. In addition, the lighting was relocated to ensure each cubicle was appropriately illuminated. This remodel has provided F&V employees with a refreshed and ultra-functional office space.
