

Windemuller has assembled an experienced Design-Build team that has worked on hundreds of projects since 1954, forging a proven track record of sophisticated electrical installations along the way. Our Design-Build projects range from commercial office spaces, shopping centers, churches, high- and low-rise multi-use spaces, data centers, complete industrial building power, lighting, communications, machine controls, and renewable energy projects.

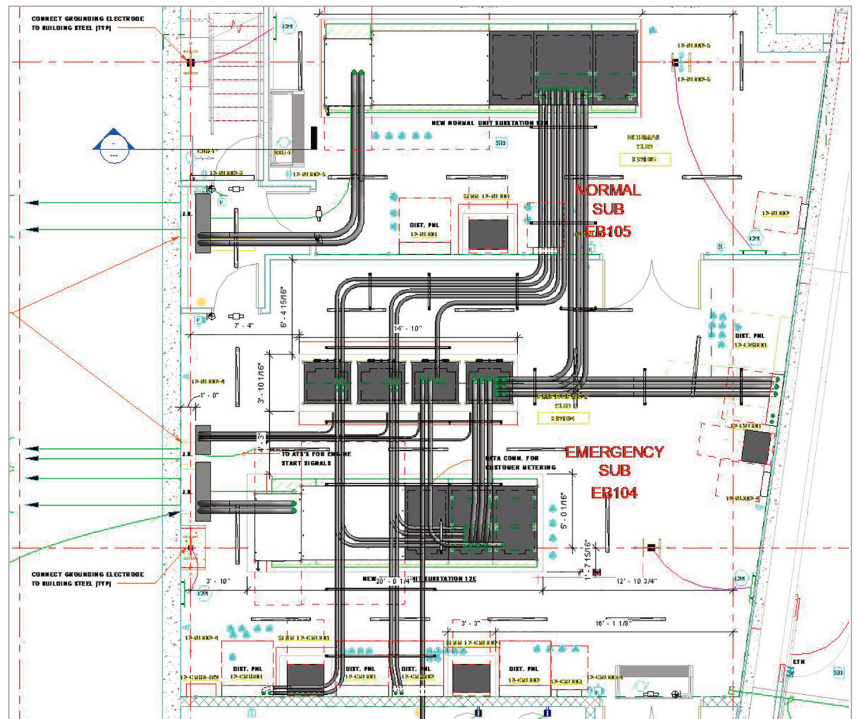

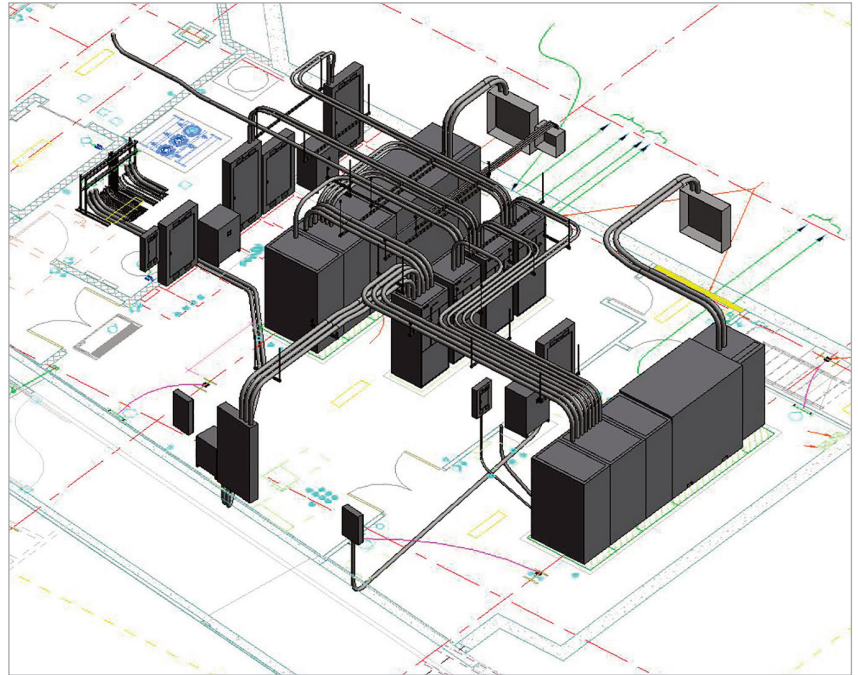

## Our Process

Our team of design-build experts works with you and your team to determine your values and identify what is most important for your project. Using media resources such as AutoCAD and Building Information Modeling (BIM) software, Windemuller creates a comprehensive design layout of the project. We then produce a rendering of what completed projects will look like, before moving into the construction phase and bringing the concept to fruition.

## The Windemuller Difference

Windemuller incorporates a value-based approach to ensure we meet our customers' needs and wants. We work with you every step of the way, offering our extensive knowledge and delivering optimal value. Windemuller synthesizes our design experience and on-site construction knowledge to see and understand both perspectives of the D/B process and share that with your team. Our team offers cost-effective and constructable solutions that best reflect your values.

We use high-end software combined with real world experience to create and execute your design-build dream. Whether it's energy efficiency, cost savings or company growth, the Windemuller team provides tailored design solutions around your objectives and goals.
